TPU IT PARK UNIVERS

How is it going? Do you have problems with practical tasks? Any concerns with learning materials?

sbogom

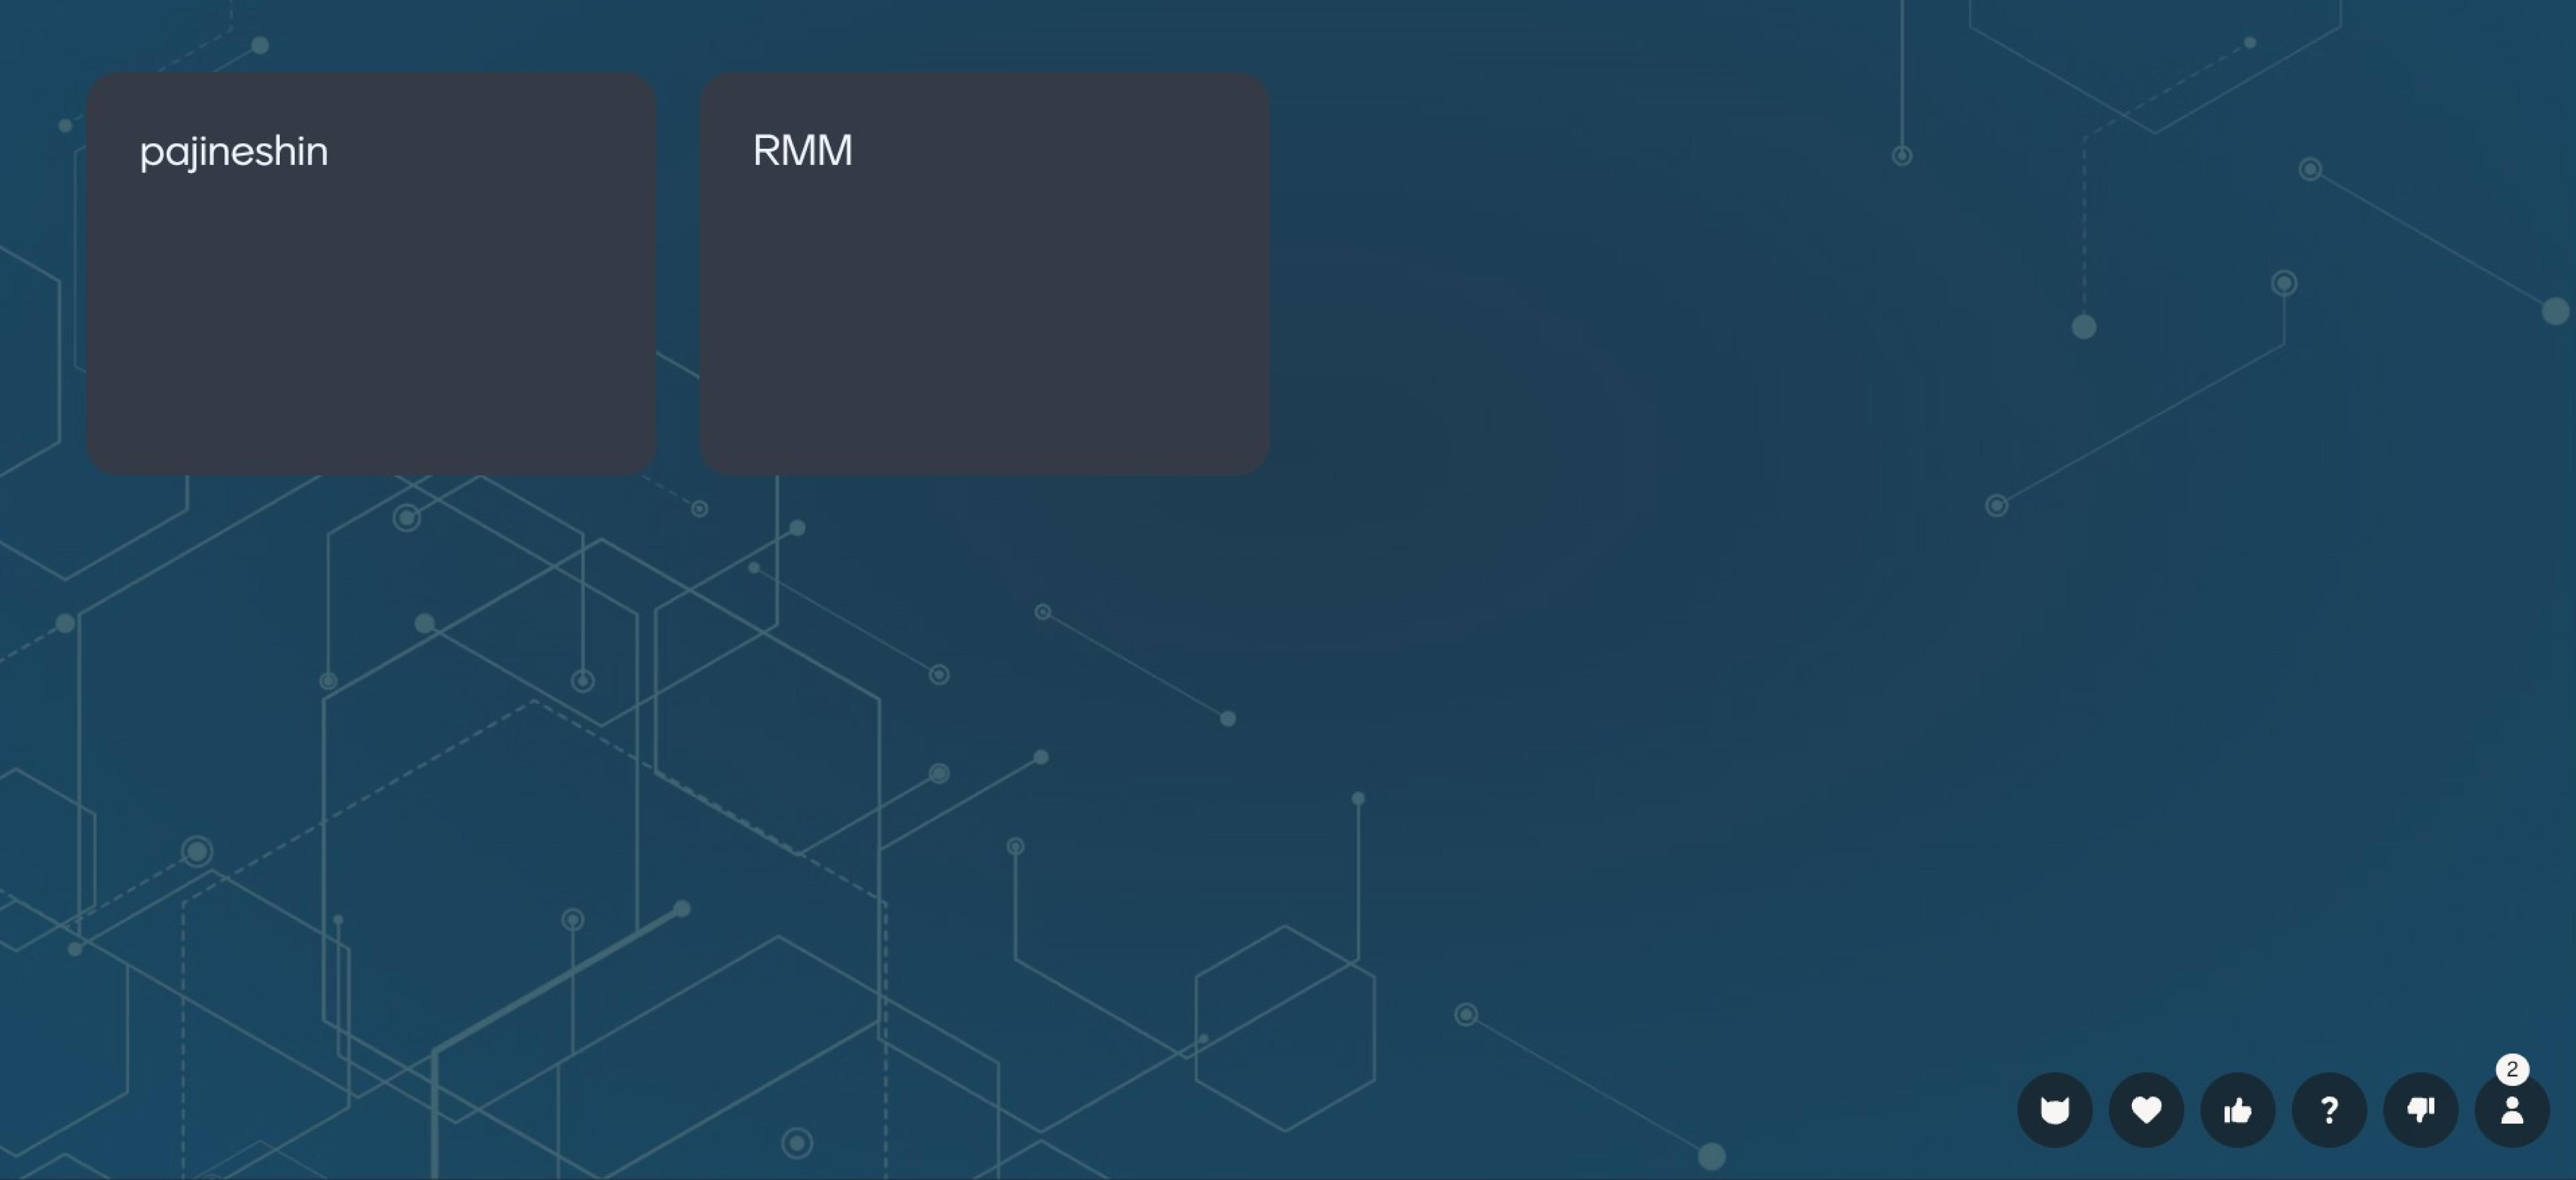

What do you remember from the previous workshop?

Which of the following annotations is used to enable Spring Boot autoconfiguration?

Spring Boot (ws-29)

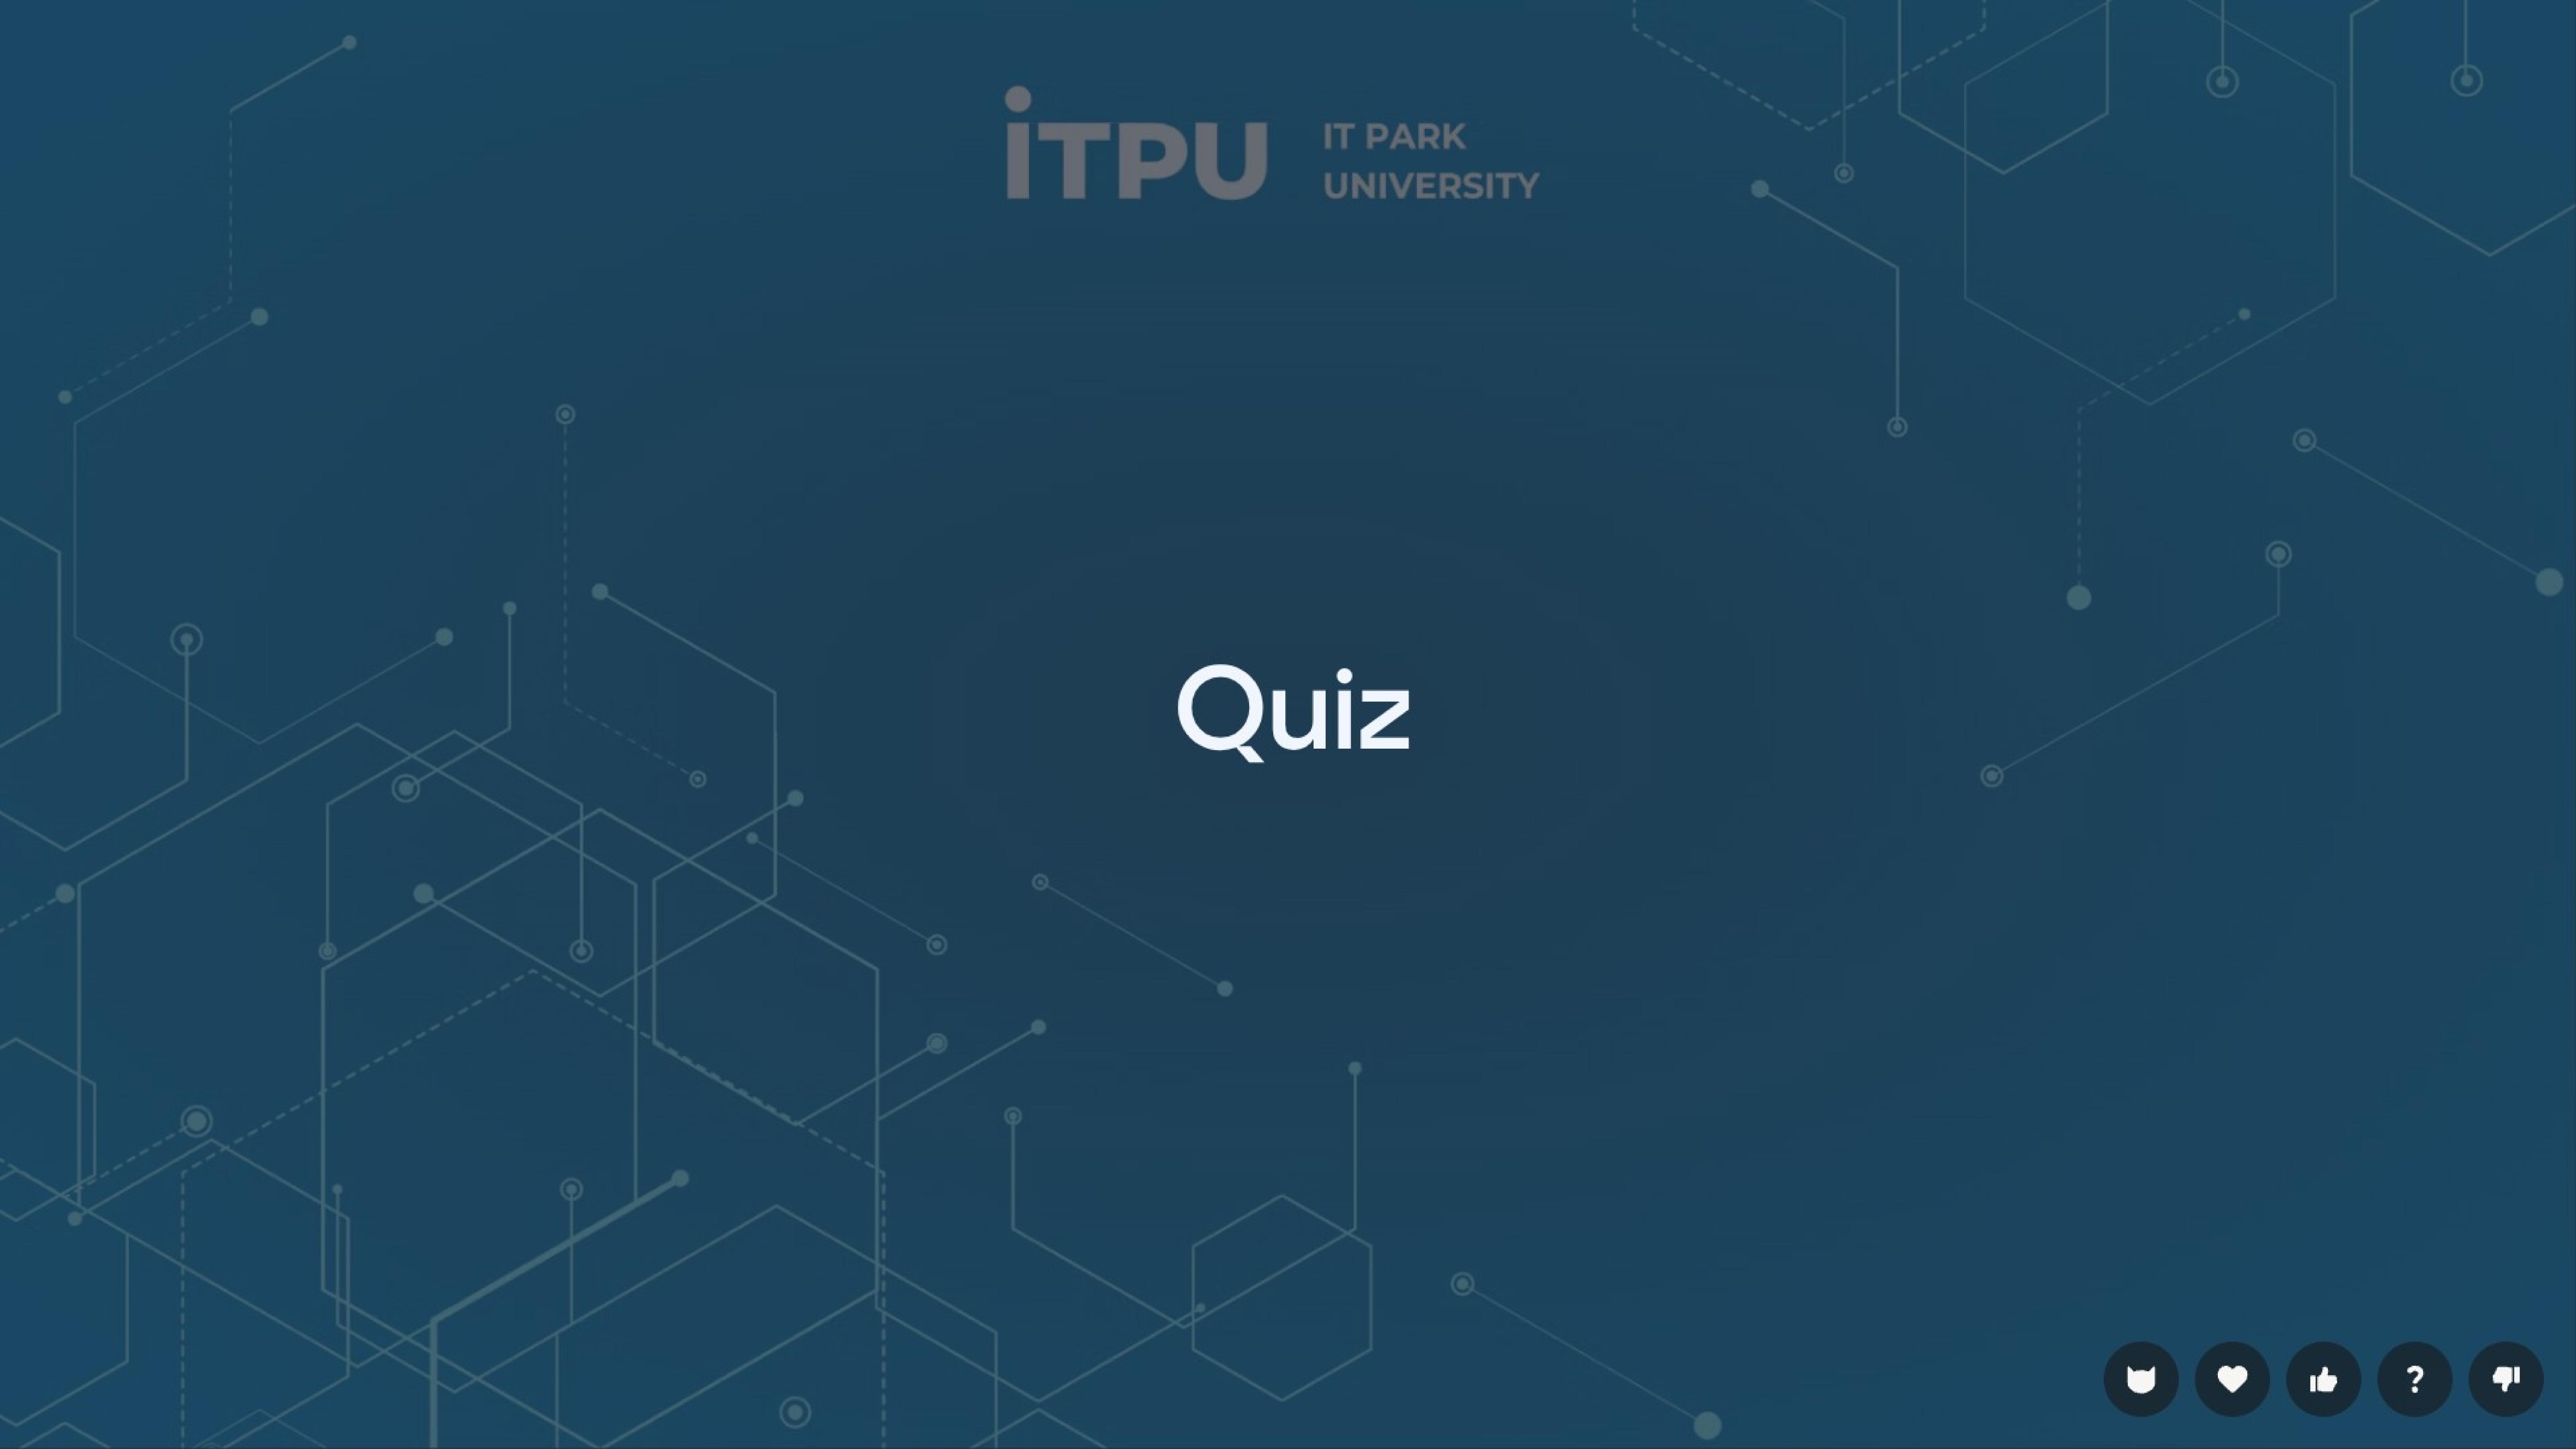

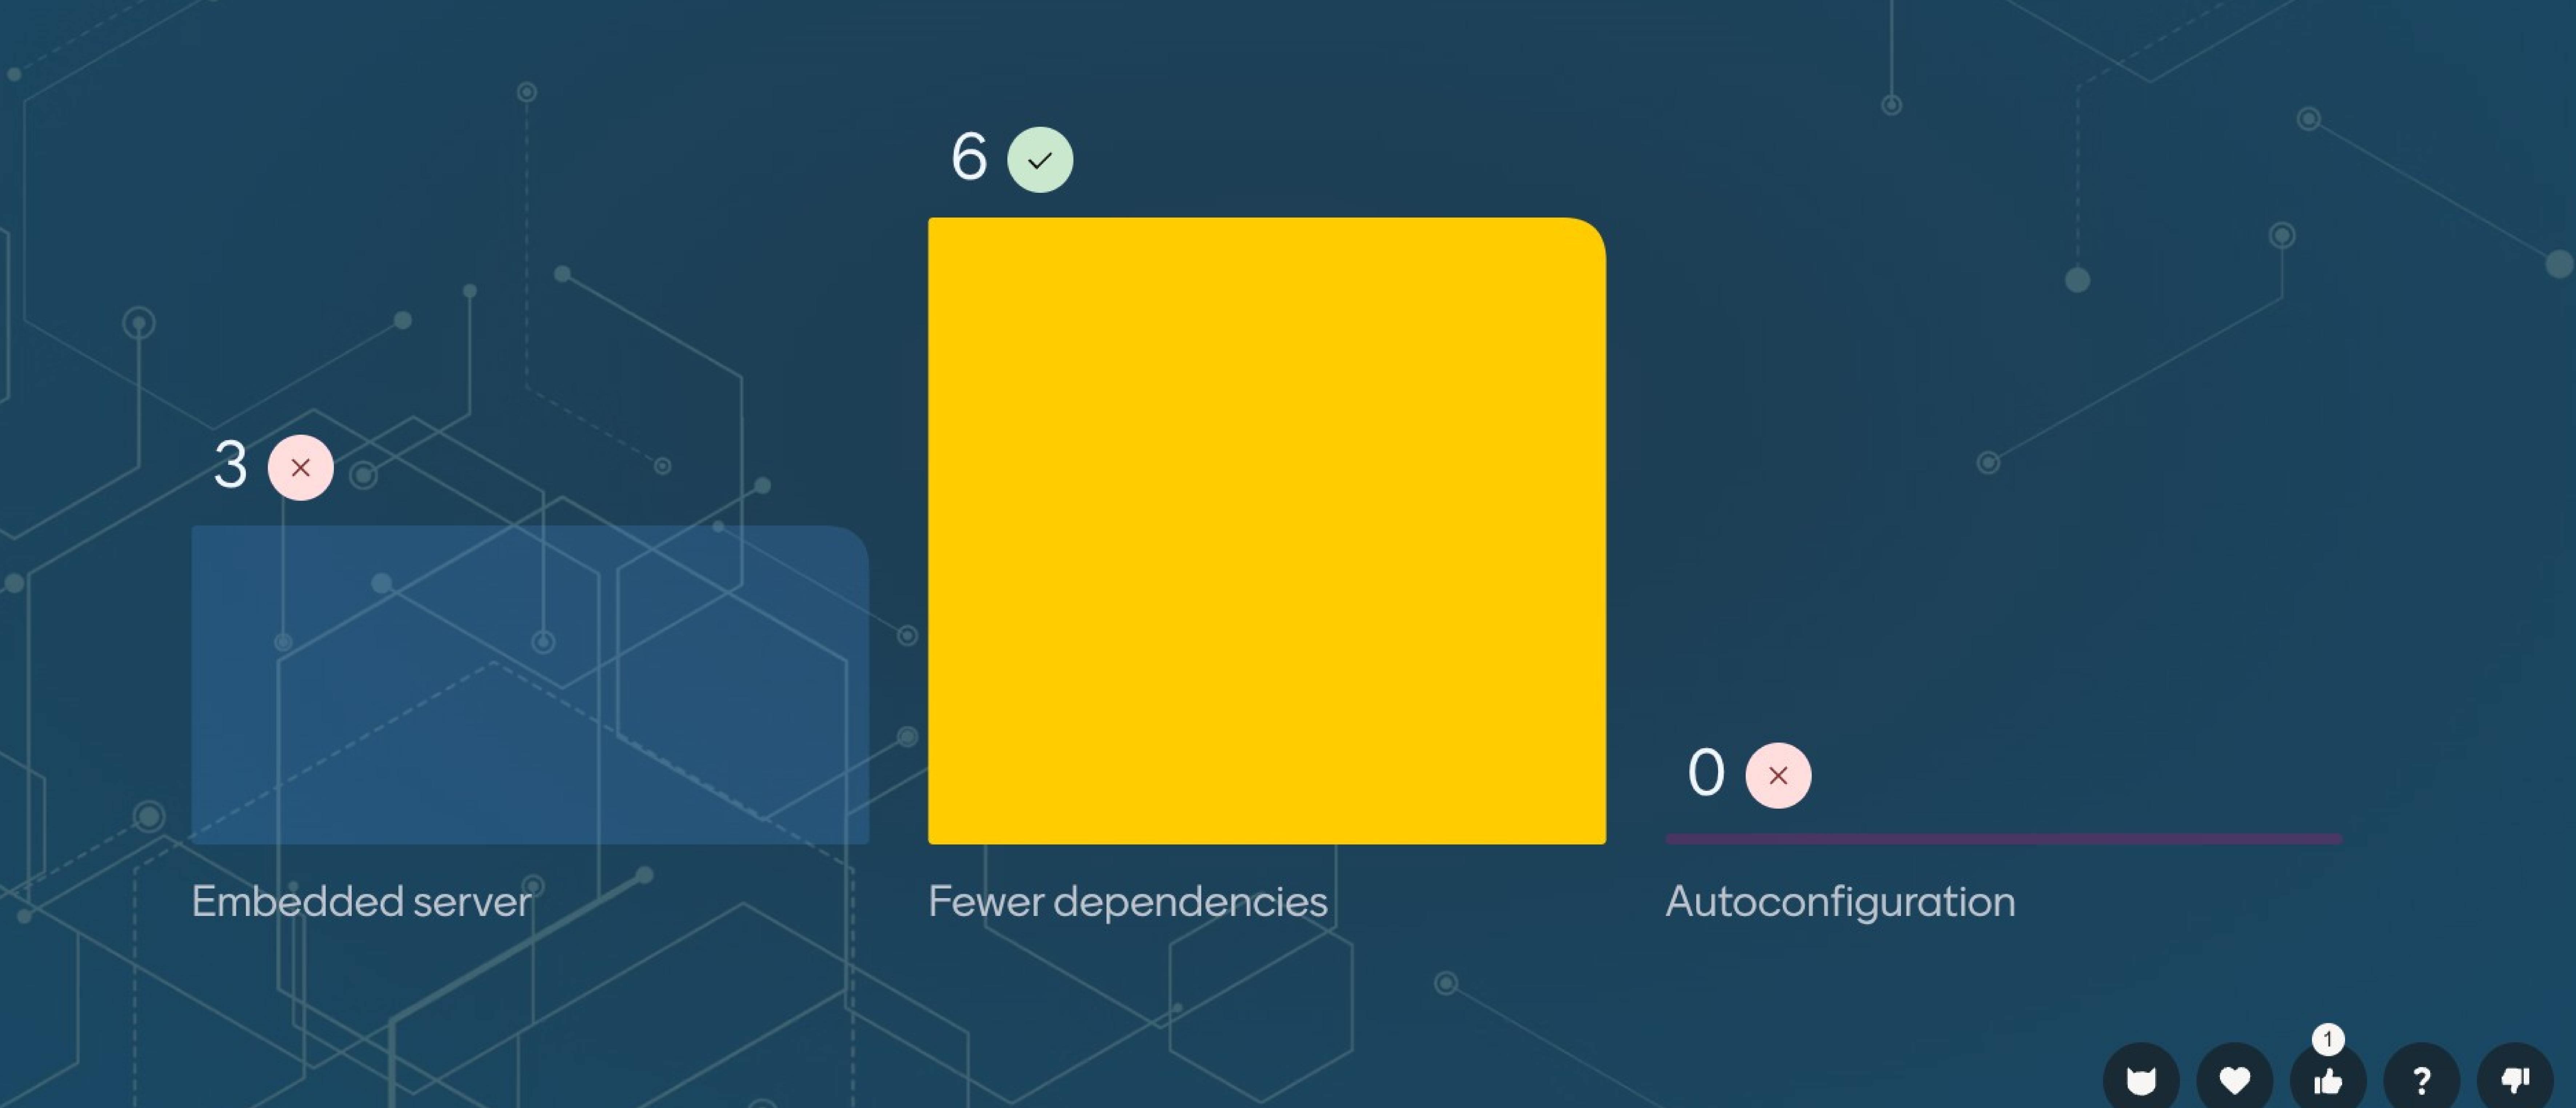

Do you have questions \ uncertainties \ concerns on materials? (If no - it means all clear for you)

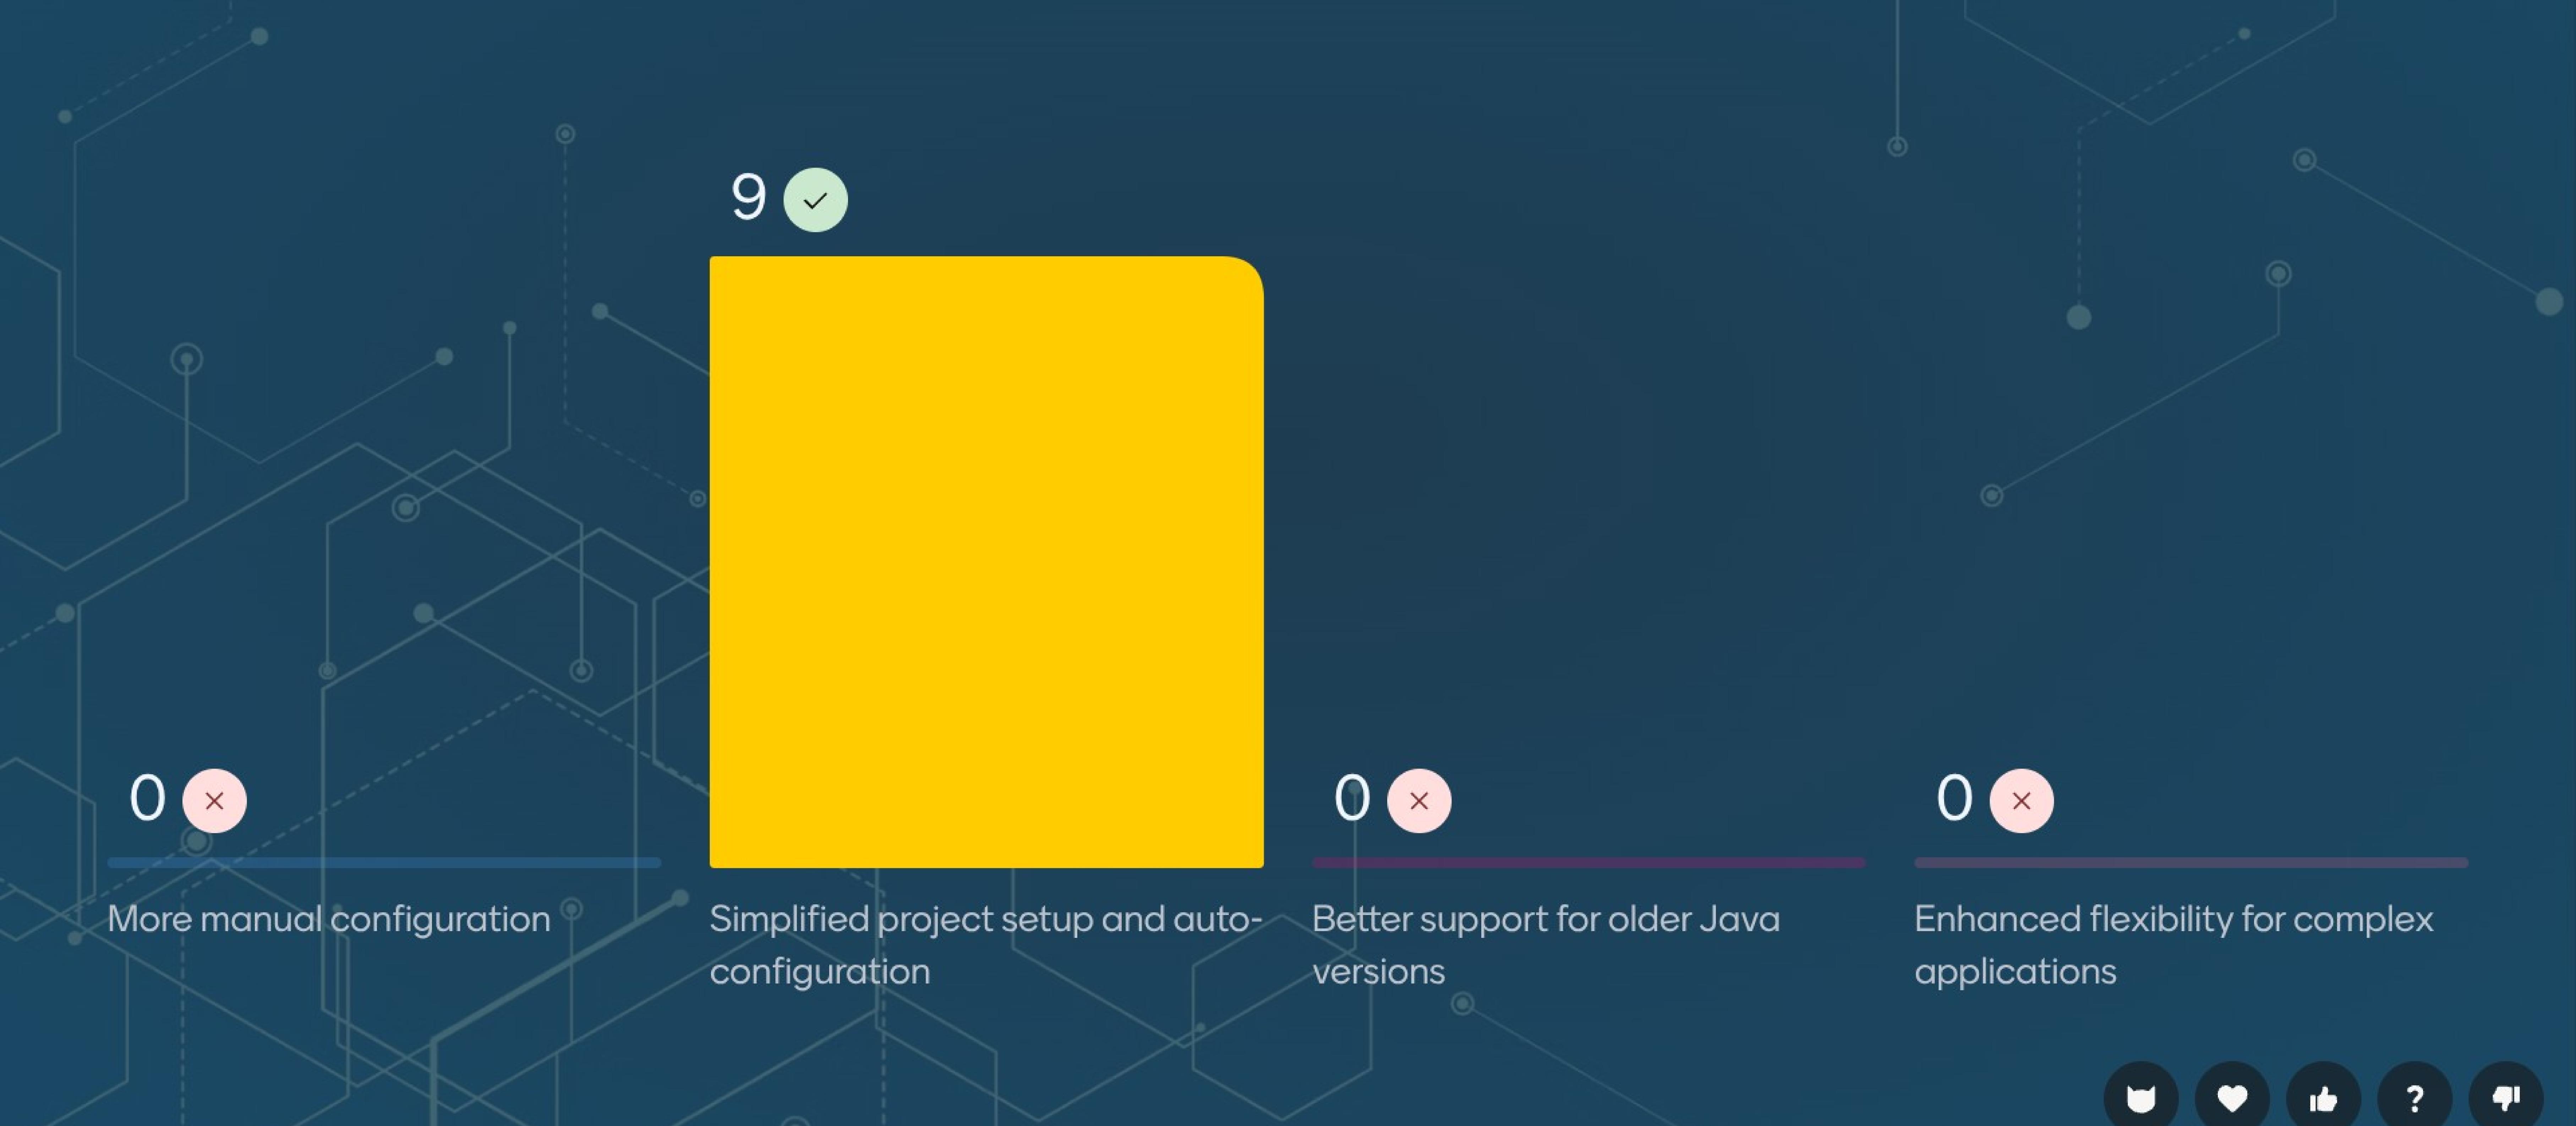

Which of the following is NOT a feature of Spring Boot?

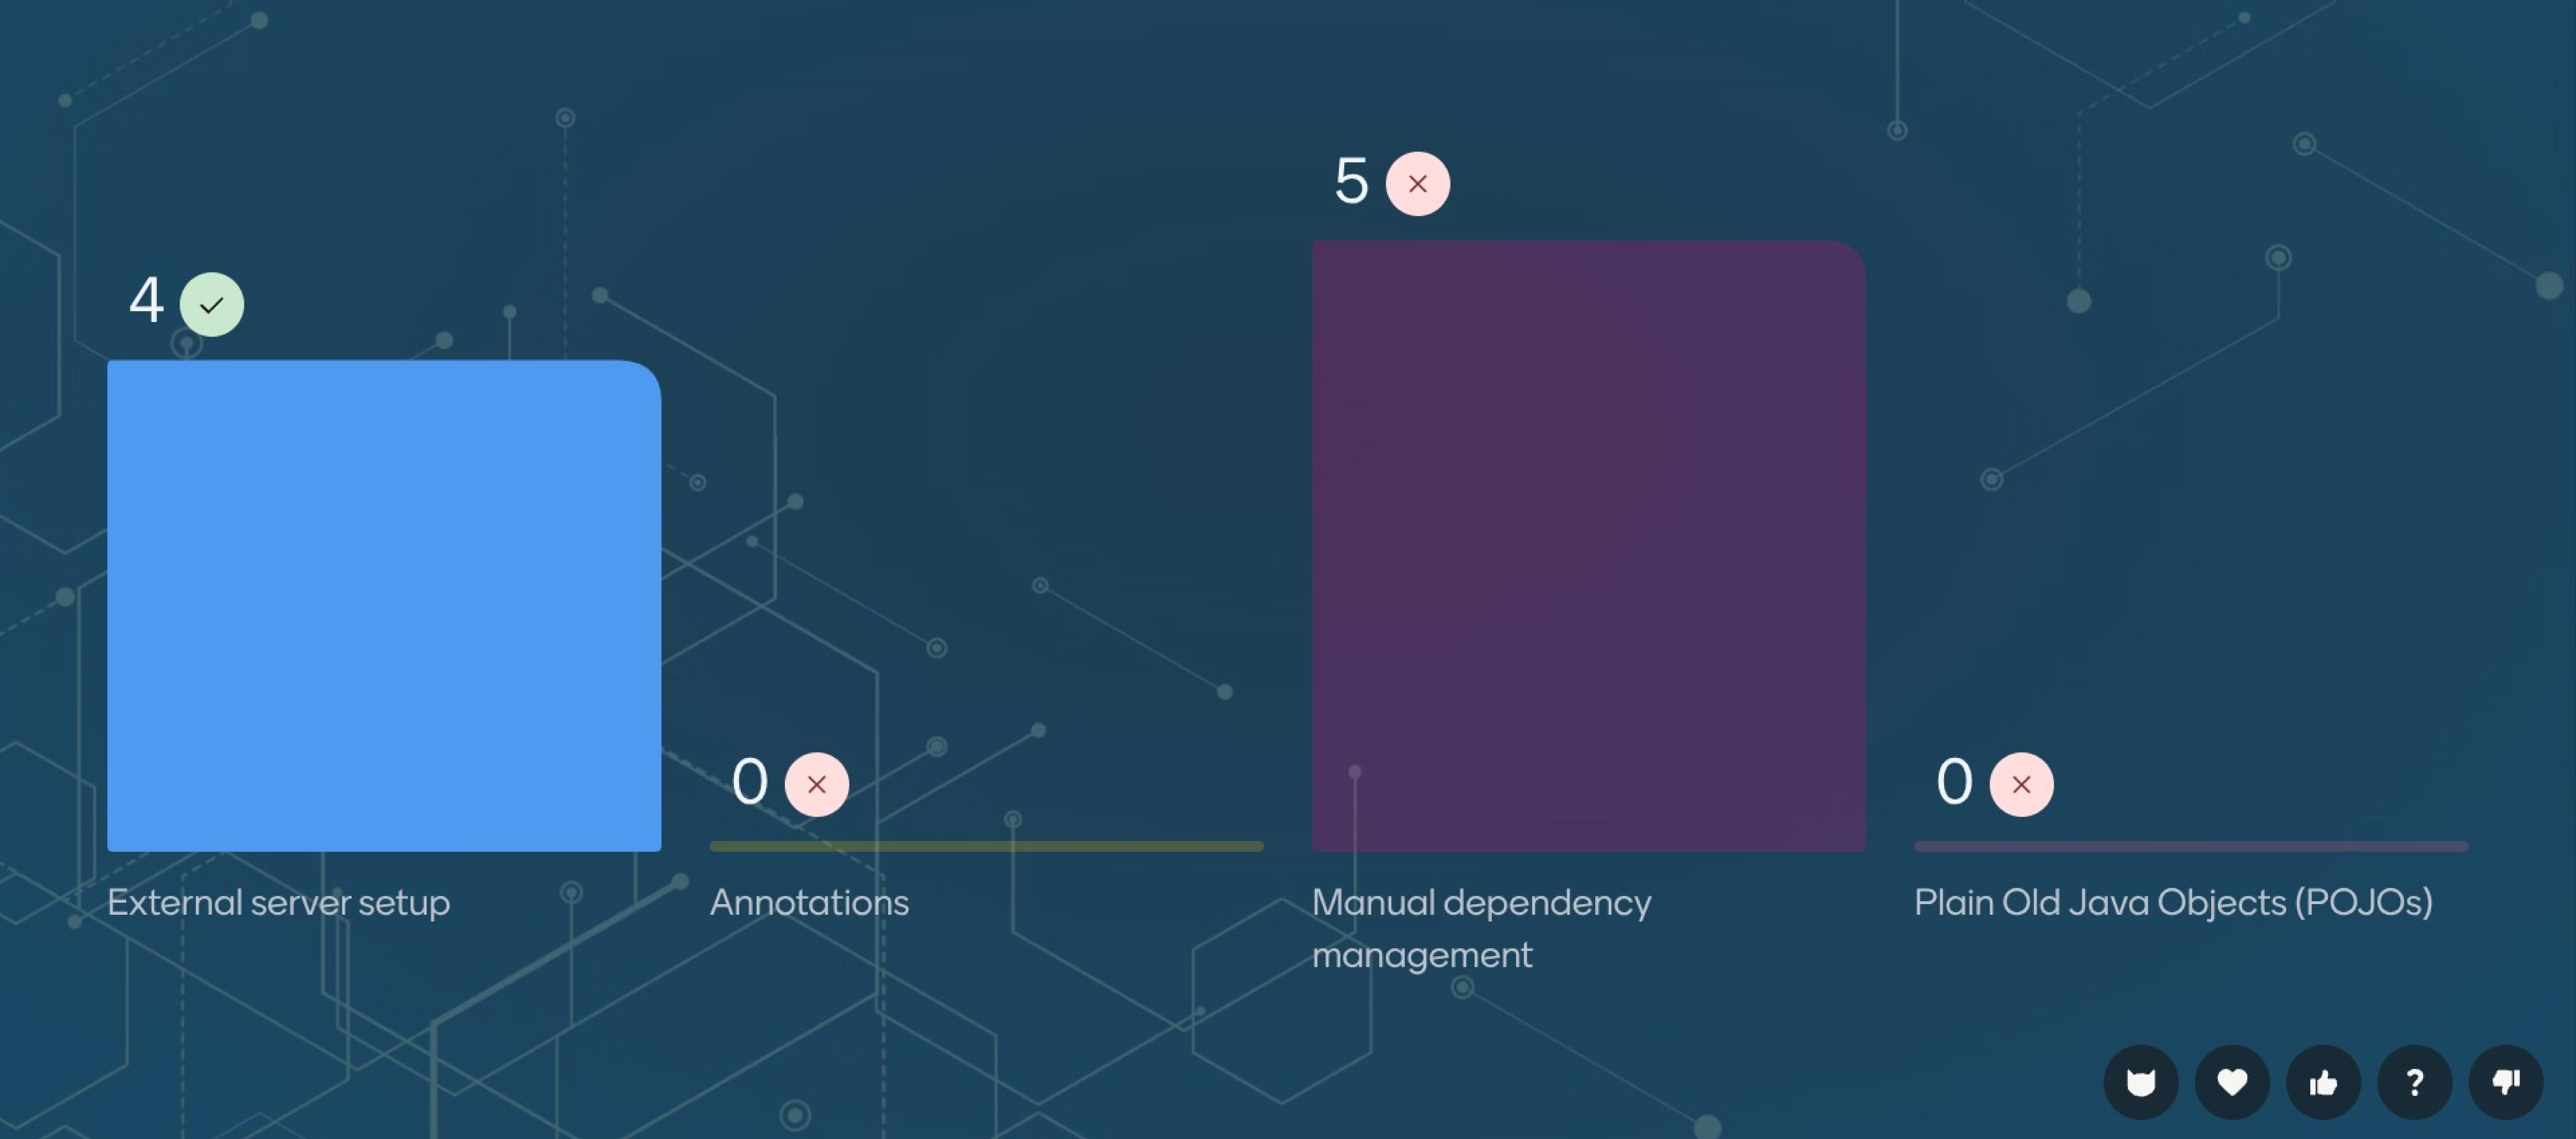

What is a primary benefit of using Spring Boot over the Spring Framework?

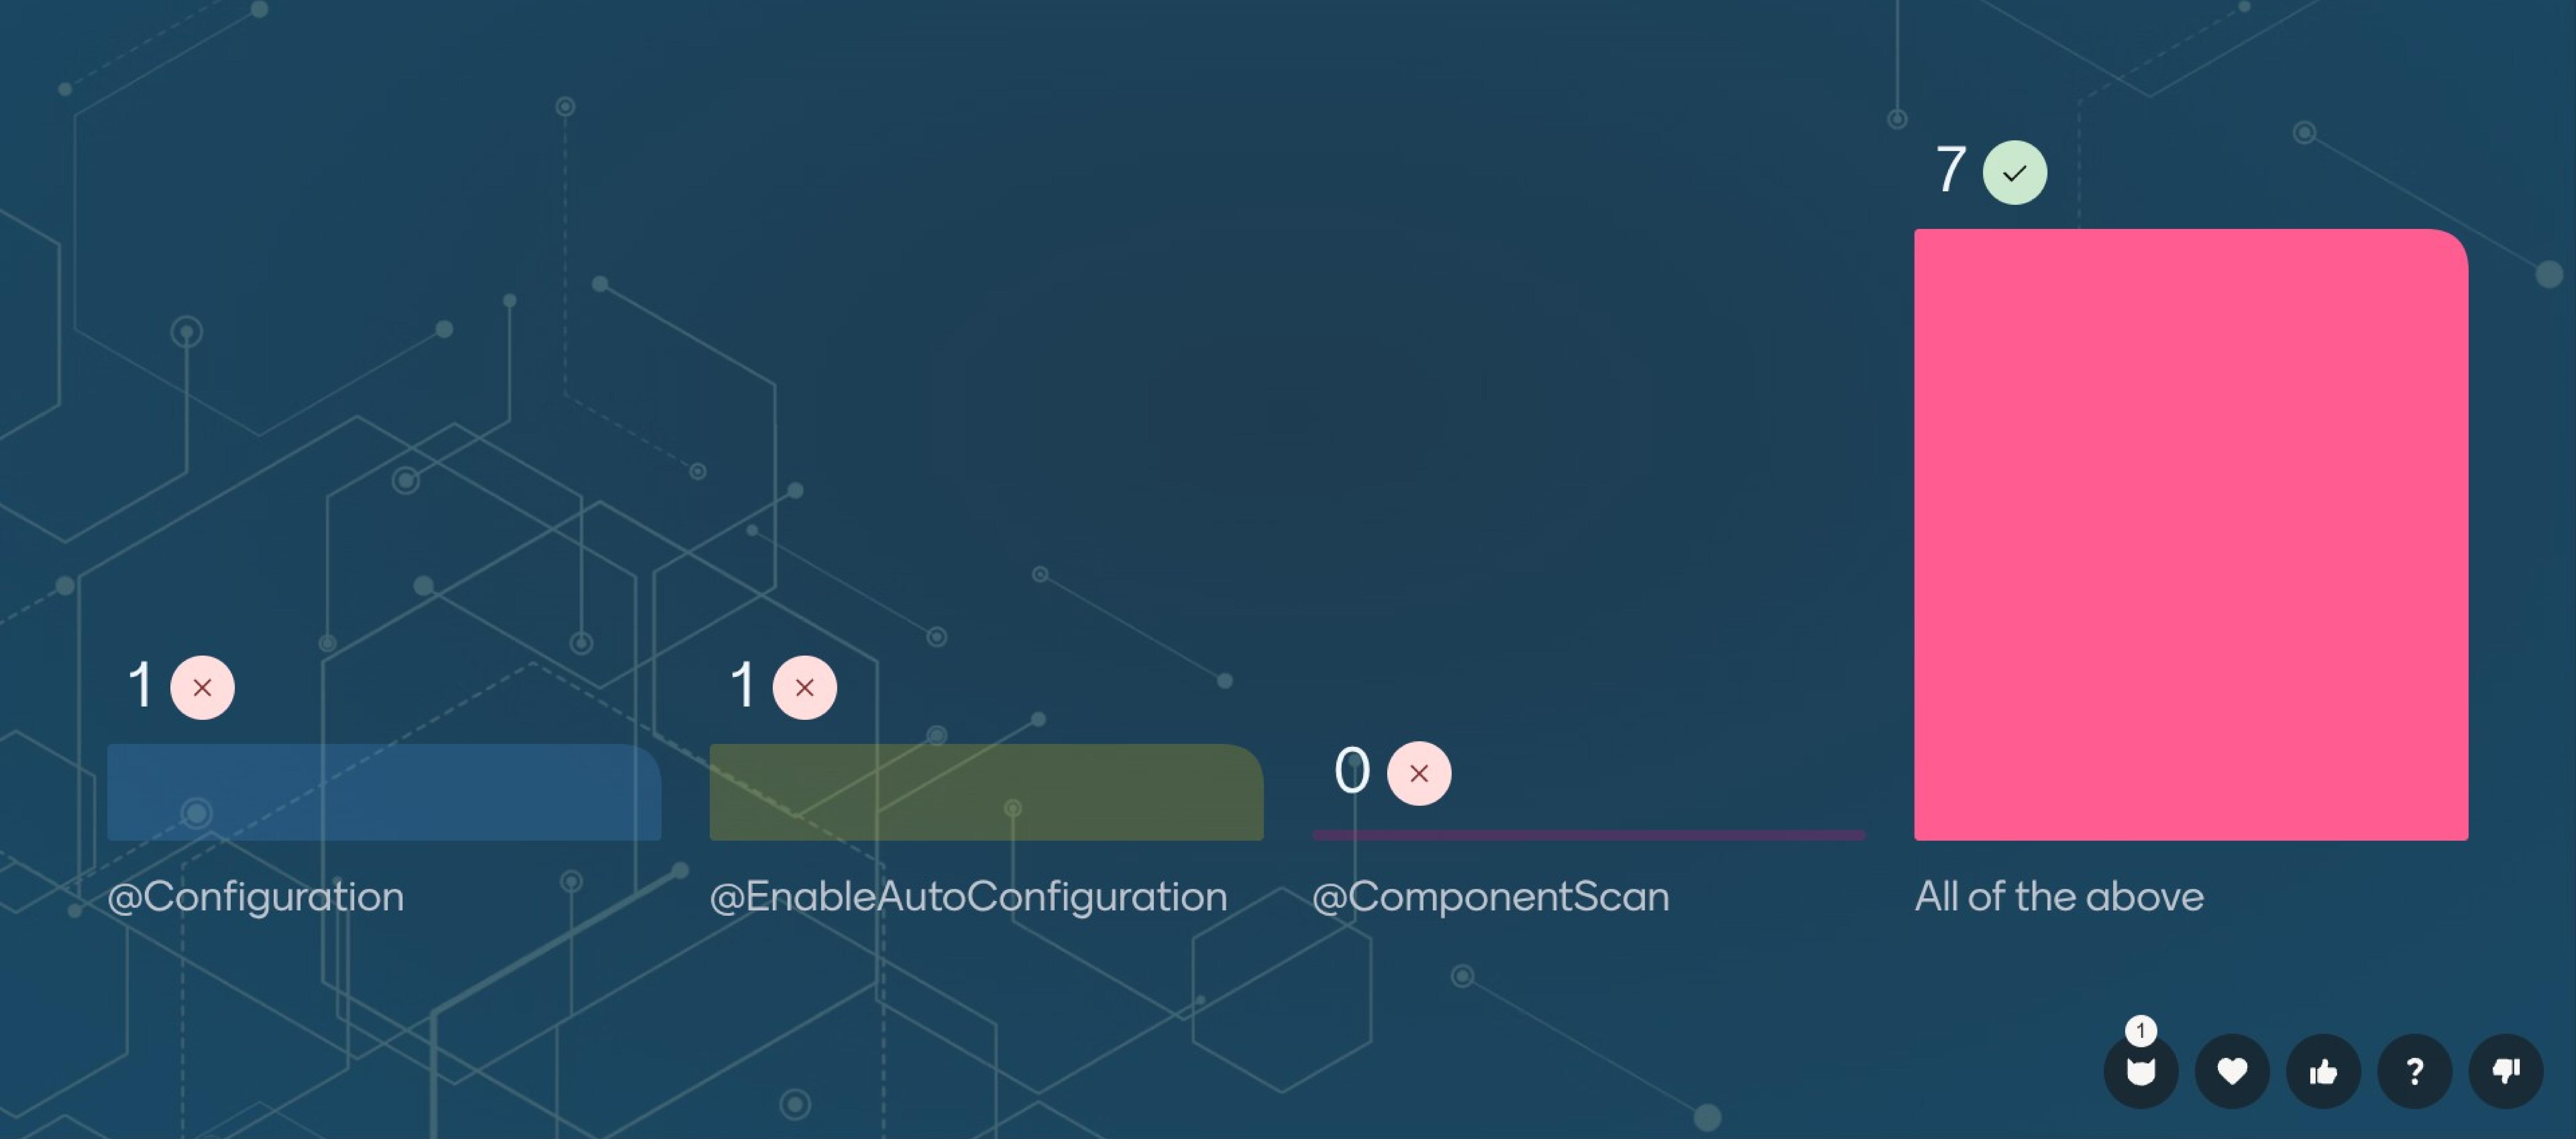

For what type of projects is the Spring Framework particularly well-suited?

What does Spring Boot eliminate the need for in its configurations?

What does @SpringBootApplication have?

What does @ConditionalOnClass?

Detects the class Finds the configuration

Let configuration based on the existence of the class

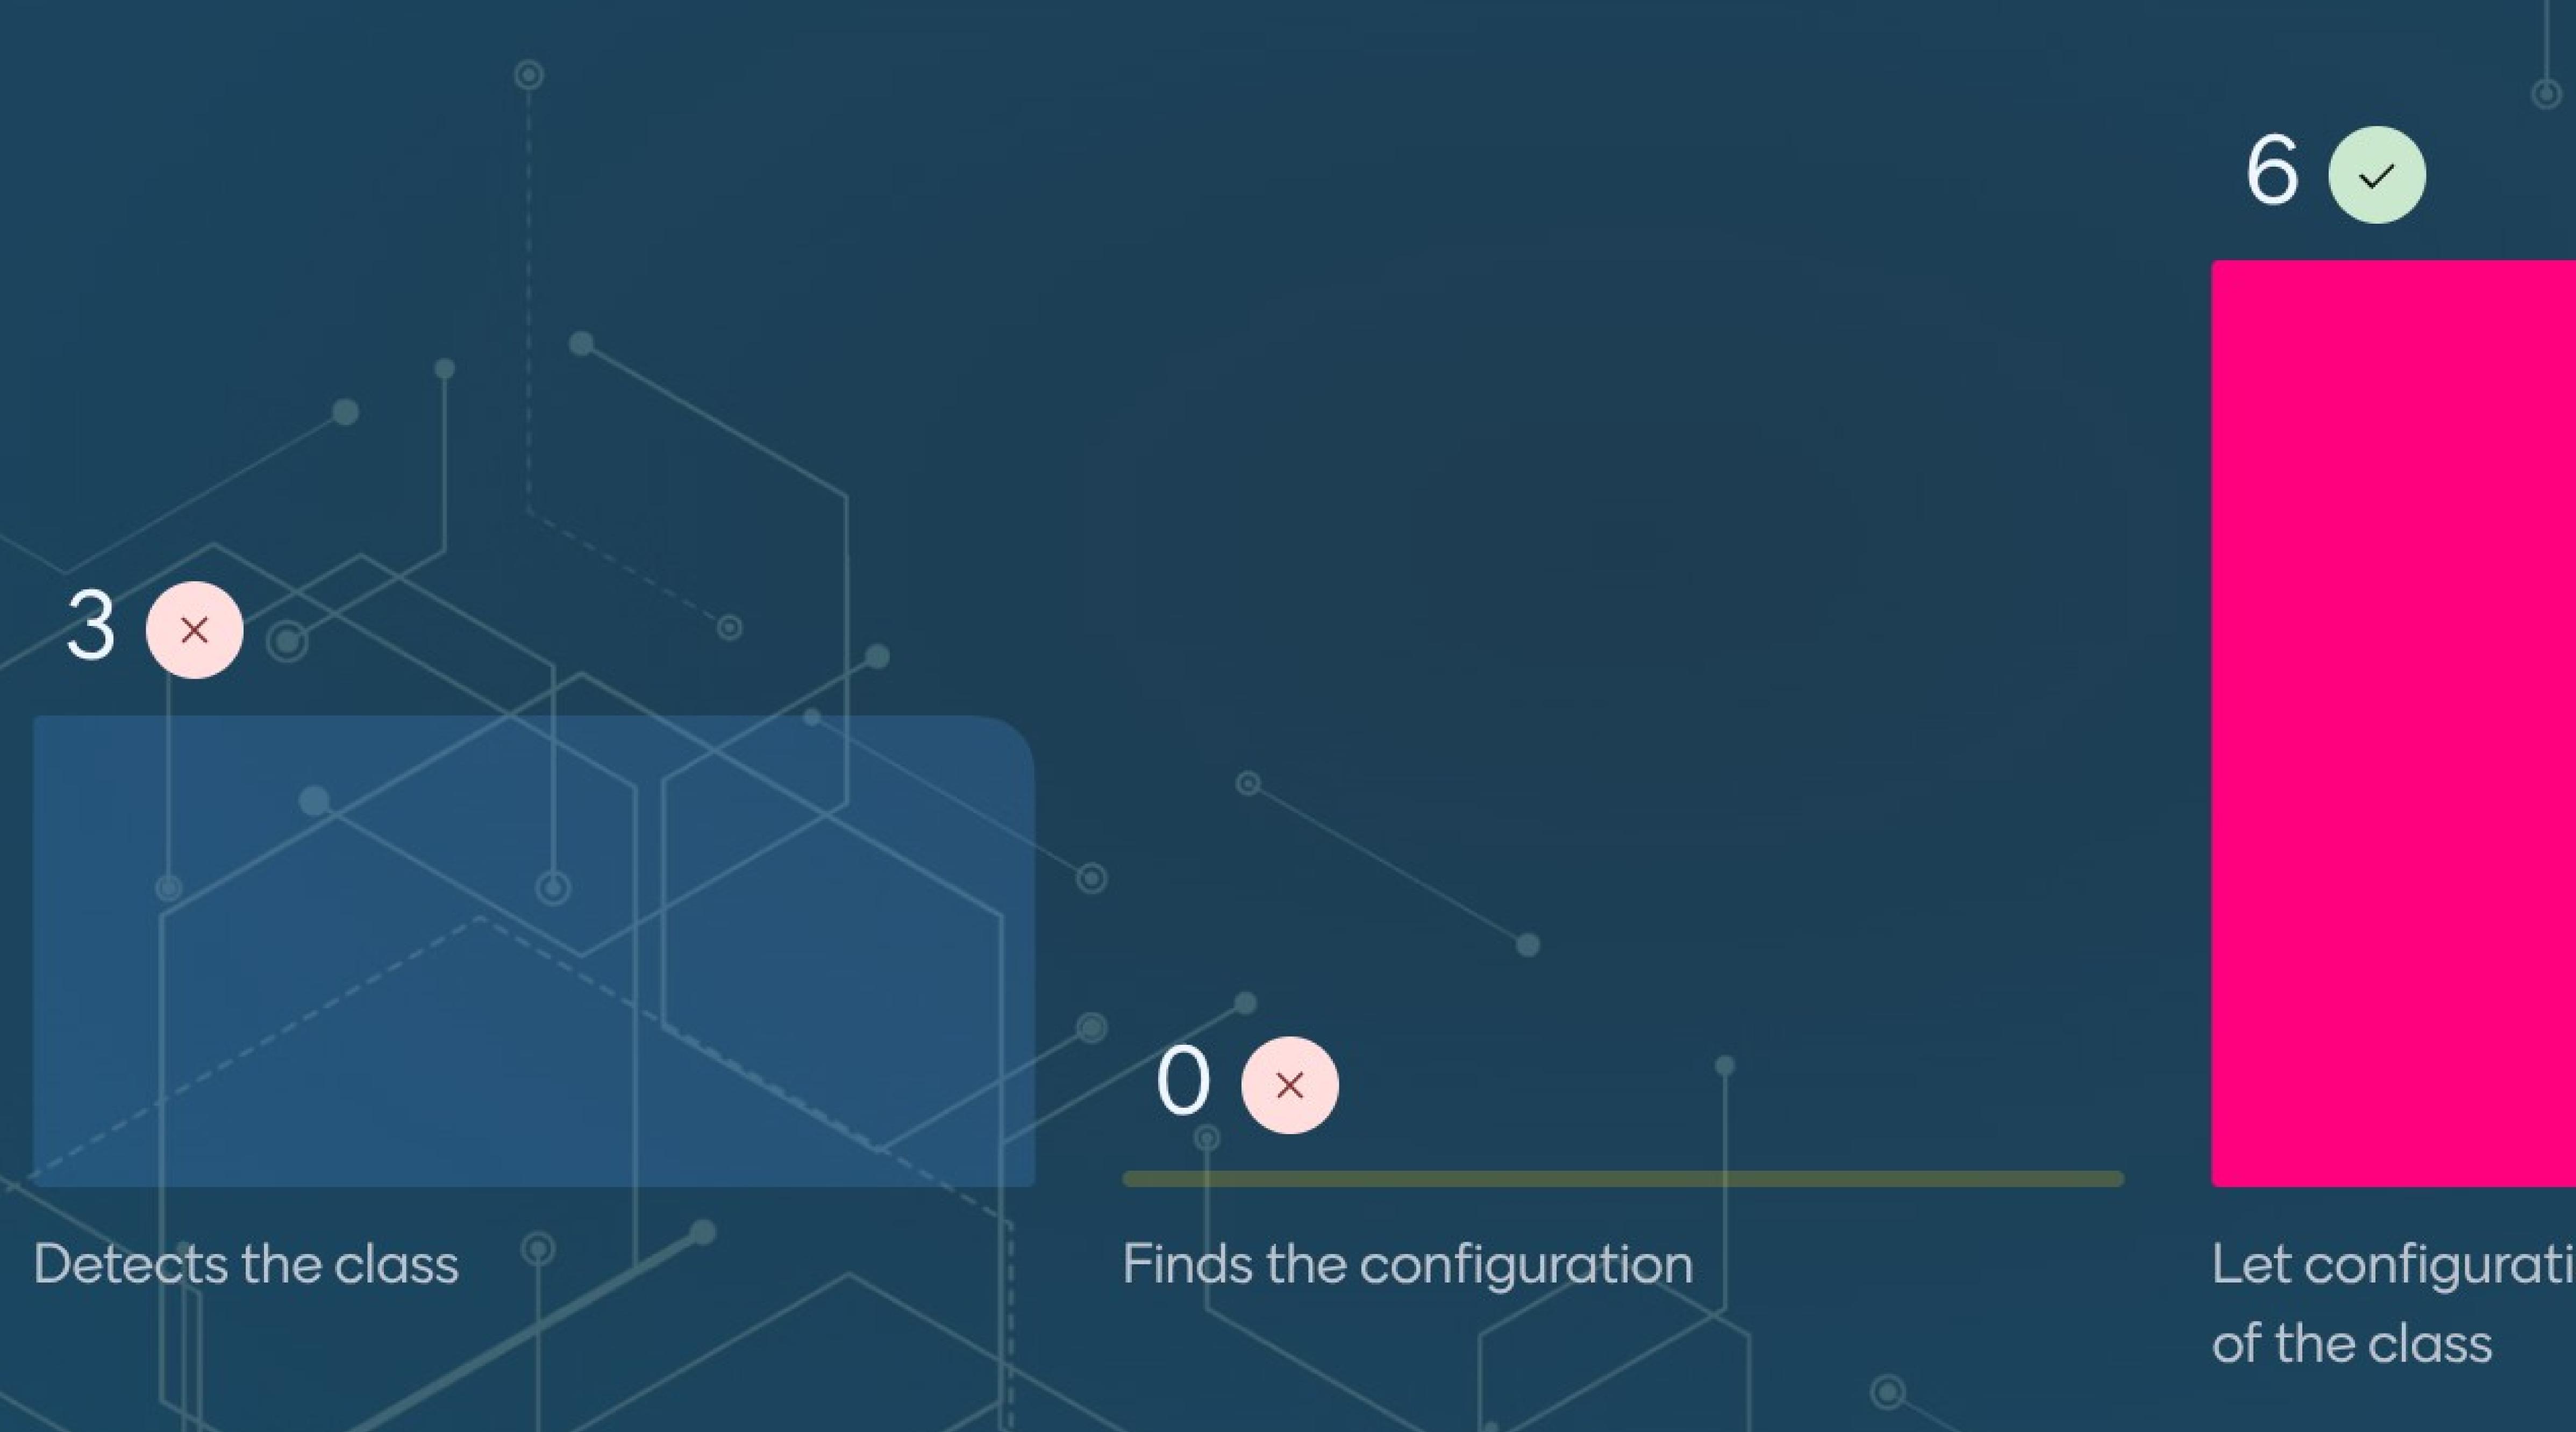

What does @ConditionalOnMissingClass?

Let configuration based on the absence of the class

@ConditionalOnClass and @ConditionalOnMissingClass

These annotations belong to Class conditions. The @ConditionalOnClass and @ConditionalOnMissingClass annotations let configuration be included based on the presence or absence of specific classes

@ConditionalOnBean and @ConditionalOnMissingBean -?

Detects the bean Finds the configuration bean

Let configuration based on the existence/absence of the bean name

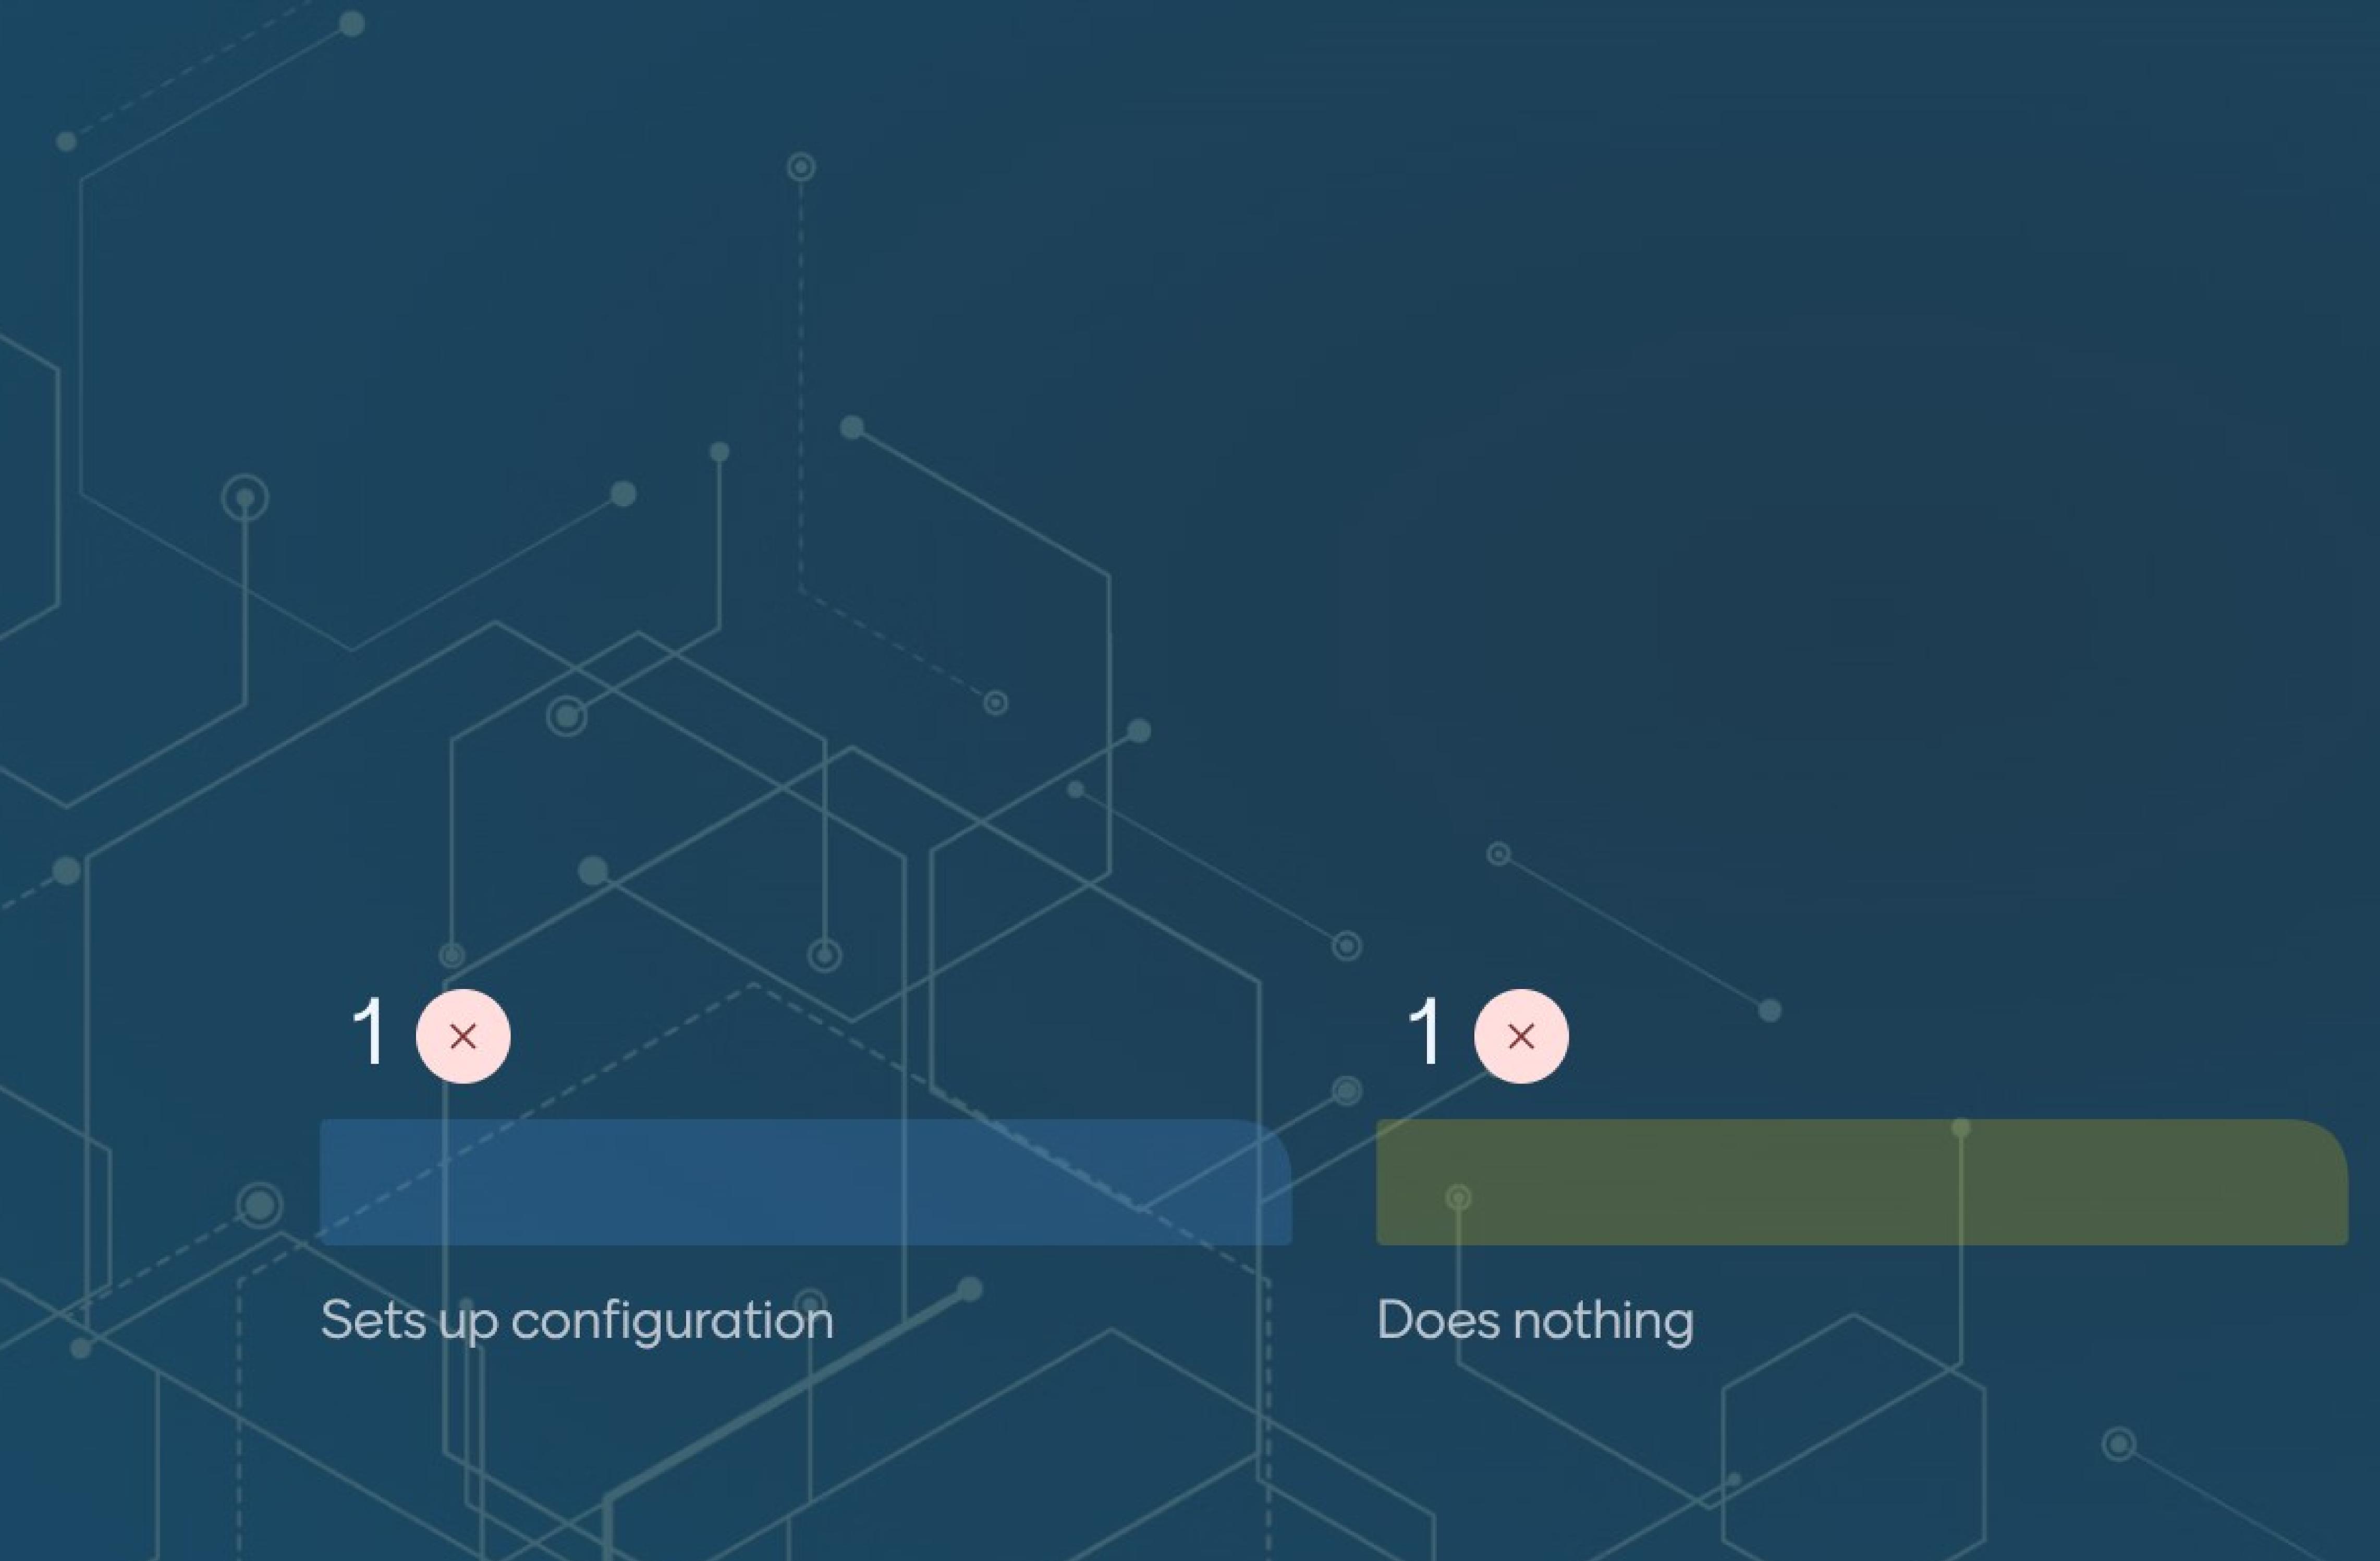

What does @ConfigurationProperties do?

Provides external binding of key value properties

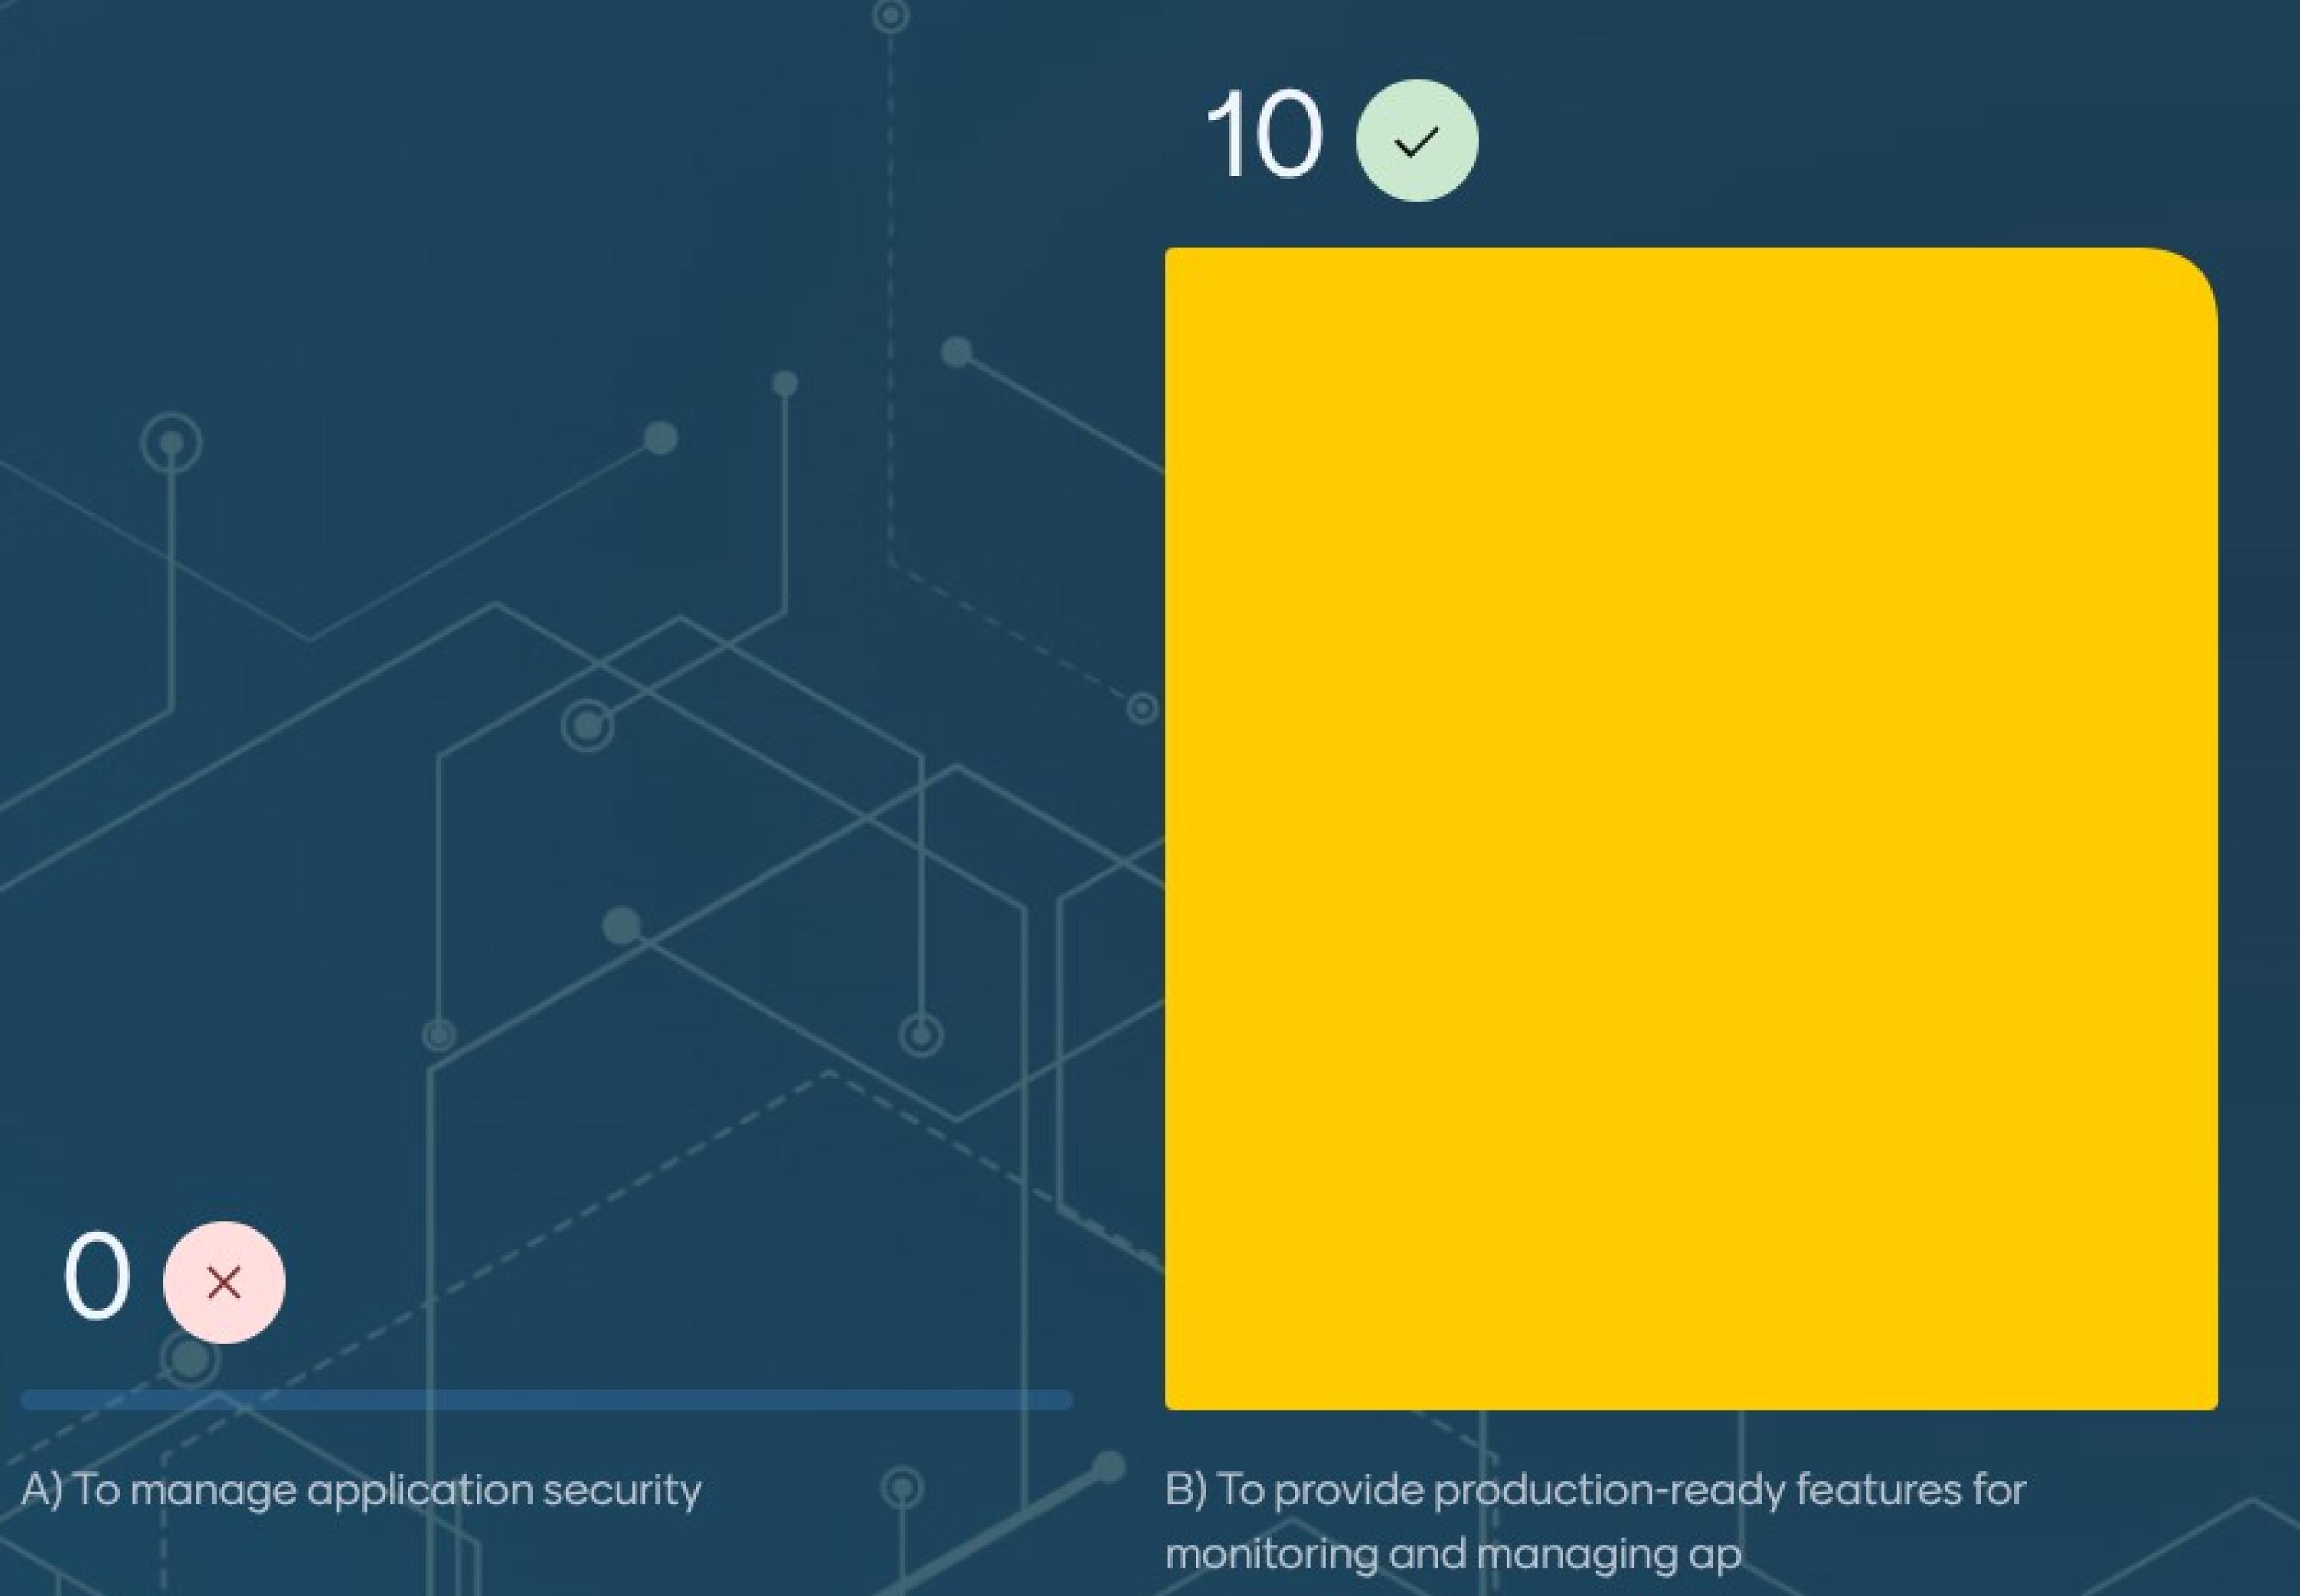

What is the purpose of Spring Boot Actuator?

C) To simplify database configuration

D) To automatically scan components in the application
